1 Types of documents

```
\documentclass{article}
\documentclass[twoside]{article} % two-sided document (affects page-numbers)
```

2 Units

```
    px pixels, depends on browser, use for electronic media
    pt points, use in print media
    em Horizontal size, 1em is equal to the font size of the text.
    ex Vertical size, 1ex is equal to the height of the letter 'x' in the relevant font (usually).
```

3 Spacing

http://www.terminally-incoherent.com/blog/2007/09/19/latex-squeezing-the-vertical-white-space/

Margins

1. Sides (odd- and even-numbered pages):

```
\addtolength{\oddsidemargin}{-0.875in}\addtolength{\evensidemargin}{-0.875in}\addtolength{\textwidth}{1.75in}
```

2. Top/bottom:

```
\addtolength{\topmargin}{-0.875in}\addtolength{\textheight}{1.75in}
```

A better way (both do the same thing; can customize the second a little more):

- \usepackage{fullpage}
- \usepackage[margin=1in]{geometry}

\geometry{paperwidth=140mm, paperheight=105mm}

This environment will indent the left and right margins by the values given.

Leave sections and headers alone, and reduce the margins of regular text? Increase subsection margins halfway.

Horizontal space

- \setlength{\parindent}{Om} Set indent for new paragraphs
- \hspace horizontal space
- \hspace{20 mm} horizontal blank space equal to 20 mm
- \hfill Pad with horizontal space to end of line
- \noindent self-explanatory

Vertical space

- \setlength{\parskip}{0.5ex} Set spacing between paragraphs
- \vspace{} vertical space
- \renewcommand{\baselinestretch}{1.5}
 This changes the spacing for everything in the document, including footnotes and tables.
- \usepackage{setspace}...\setstretch{1.5} Can apply this to only part of text?
- \usepackage[doublespacing]{setspace} Same as previous option?

4 Breaking up text (or preventing it)

- \\ Force line break
- \newpage Jump to a new page after previous section
- \clearpage ?
- \begin{samepage}... \end{samepage} Keep something from being split by a page break.

5 Headers and footers

In preamble:

```
\usepackage{fancyhdr}
\pagestyle{fancy}
\setlength{\headheight}{15pt}
\lhead{text} % Top left
\rhead{text} % Top right
\chead{text} % Top center
\lfoot{text} % Bottom left
\rfoot{text} % Bottom right
\cfoot{text} % Bottom center
```

The \headheight option sets the amount of space between the header and the top edge of the paper. Value has to be greater than 13.6, otherwise will get an error message. Document still compiles, but better safe than sorry.

To change location of page numbers:

```
\fancyhf{} % Clear all headers and footers (including default page number). \renewcommand{\headrulewidth}{Opt} % remove the header rule \rfoot{\thepage} \lfoot{\thepage}
```

6 Text alignment

Horizontal alignment

\usepackage{ragged2e}

- \begin{flushright}...\end{flushright}
- \begin{center} ... \end{center}
- \begin{justify} ... \end{justify}
- \centering

The last bullet can be used inside the figure environment, whereas begin/end center is its own environment, and can't be. \center is not a thing.

Vertical alignment

[ctb] Options like this will center at top, center, bottom, etc. Actually this usually doesn't work.

7 Fonts

- https://www.tug.org/pracjourn/2006-1/schmidt/schmidt.pdf
- https://en.wikibooks.org/wiki/LaTeX/Fonts

\usepackage{lmodern} Font that applies to entire doc. \renewcommand*\familydefault{\sfdefault} % Only if the base font of the document is to be sans serif \usepackage[T1]{fontenc}

Font size

10pt is the default font size. \documentclass[12pt]{article} \documentclass[11pt]{article} \documentclass[10pt]{article} \fontsize{}{<line size>} Not entirely sure how this works yet. Example: \Huge \huge {\Large I want this text to be big.} I want this text to be big. \Large \large (enclosing entire thing in {}s keeps from having to use \normalsize \normalsize at the end). \small \footnotesize

Font style

\scriptsize \tiny

Modal

\mdseries \bfseries \upshape \itshape \scshape \slshape \rmfamily \sffamily \ttfamily These don't read text as an argument, and can somehow be used in the verbatim environment?

Textblock

\textbf{bold} \textit{italics, for quotes or titles} \texttt{computer style} \textsf{sans serif} \textsl{slanted} \textsc{Small caps}

bold italics, for quotes or titles computer style sans serif slanted SMALL CAPS

\emph{This text is also in italics, for emphasis} \underline{This text is underlined}

This text is also in italics, for emphasis

This text is underlined

Sections

https://www.sharelatex.com/learn/Sections_and_chapters#Numbered_and_unnumbered_sections

\section{My First Section} \subsection{My Subsection} \subsubsection{A subsubsection} \paragraph{text} \subparagraph{text}

Paragraphs are not numbered or followed by a line break. Note that \paragraph{} and \par are not the same thing. \par does the same thing as a blank line.

Space around section titles

\titlespacing*{command}{left}{before-sep}{after-sep}[right-sep] \titlespacing*{\section}{-0.50in}{0pt}{0pt} \titlespacing*{\subsection}{-0.25in}{0pt}{0pt}

Left margin adds or subtracts from what is already there. The "-sep" values are absolute, so negative makes no sense (I think). Setting these to 0pt reduces the default spacing a little.

Font size and style

Here is some text.

\usepackage{titlesec} \titleformat*{\section}{\LARGE\bfseries} \titleformat*{\subsection}{\Large\bfseries} \titleformat*{\subsubsection}{\large\bfseries}

Color

\usepackage{sectsty} \sectionfont{\color{blue}} \subsectionfont{\color{blue}} \subsubsectionfont{\color{blue}}

Labels

```
\label $$ \operatorname{\mathbb{R}}(x) = \operatorname{\mathbb{R}}(x) . Text in front of label $$ \operatorname{\mathbb{R}}(x) . Roman numerals $$ \operatorname{\operatorname{\mathbb{R}}(x)}(x) .
```

Setting this to 1 would number sections only, setting it to 2 would number sections and subsections, but not subsubsections, etc.

Referring to sections in text using section labels

```
See section \S \ for the data description. ... \subsection{The Data} \label{data} ...
```

May need to run pdflatex twice for this to take effect.

9 Table of contents

\tableofcontents wherever you want it to go. You will have to run pdflatex twice. It appears that creating a toc puts headers on all pages, which may not be desired. See §5 for getting rid of them.

In preamble: \setcounter{tocdepth}{n} where n is the number of levels deep to go, e.g. 1: sections, 2: sections and subsections, etc.

Some sections, like those with '*' won't be included. To add them: Syntax: \addcontentsline{type}{section_level}{entry} Example: \addcontentsline{toc}{section}{Preface}

To change space between items in toc:

```
\usepackage{setspace}
...
\begin{document}
\addtocontents{toc}{\protect\setstretch{n}}}
```

where n is between 0 and 1? Set to fraction of default? "protect" has something to do with "fragile" things.

Include figures and tables:

Note that the figure and table environments need to be used.

Two columns:

\listoffigures \listoftables

```
\usepackage[toc]{multitoc}
\renewcommand*{\multicolumntoc}{2} # but 2 is the default...?
\setlength{\columnseprule}{0.5pt}
```

10 Lists

- ftp://ftp.nsu.ru/mirrors/ftp.dante.de/tex-archive/macros/latex/contrib/enumitem/enumitem.pdf
- https://www.ntg.nl/maps/11/33.pdf
- $\bullet \ \, https://www.sharelatex.com/learn/Lists\#Reference_guide$
- http://ctan.mirrors.hoobly.com/macros/latex/contrib/enumitem/enumitem.pdf

• http://www.troubleshooters.com/linux/lyx/ownlists.htm

New (unorganized) stuff: "Label" refers to the bullet, number, or description item.

```
\setlist[enumerate]{font={\bfseries}}% global settings, for all lists
\setlist[enumerate,1]{label={(\arabic*)}}
\setlist[enumerate,1]{label={(\roman*)}}

% Change bullet size. Not sure what the difference is between the two.
\renewcommand{\labelitemi}{{\\vertiny*\bullet$}}
\renewcommand{\labelitemi}{{\\tiny$\bullet$}}

% Make your own list
\begin{list}{default_label}{decls}
    default label: Text to be used as a label (leave blank if none desired)
    decls: geometrical parameters

In preamble:
\usepackage{enumitem}
\setlist[<typeoflist>,<n>]{<options>}
```

typeoflist can be itemize, enumerate, description, etc. n is the nested level (1 for top level). Options are as follows:

Horizontal spacing

labelindent Used, but not described...

rightmargin Change right margin of description text.

leftmargin Distance from the left edge of the current environment (leftmost edge of labelwidth) to the left margin of the item label (not text?). Remember, environments can nest. Defaults to 0. Can only make this so big, eventually text doesn't move anymore. Need to figure out exactly what all this is doing. Pretty sure this only affects multi-line descriptions (the text NOT on the same line as the label).

listparindent The indent of the first line of each paragraph in an item, except for the first paragraph of an item. If you're pressed for vertical space and want to decrease interparagraph spacing within items while still giving the user cues as where new paragraphs begin, this is the way to do it.

labelwidth Width allotted to the label. This should be equal to or greater than the longest *expected* label. Good for lining up text when labels are left-aligned.

labelsep The distance between the rightmost part of the label (assuming you haven't changed the label from its default right justification) to the left margin of the item body. This is one of the handiest adjustments you can make to create the ultimately readable list for your exact situation. Use it early and often.

BEWARE: This setting enforces this distance by shoving the label left rather than moving the body left margin right. If you set this you might need to add a corresponding amount to leftmargin, if you want your labels in a specific place. Space between label and following text

itemindent Only indents the first line (with the label) This length is capable of causing some real ugliness—leave it alone unless you have a really good reason not to. What this horrid adjustment does is takes the label and first line of a multiline body, and push them left from the normal item body left margin. This makes the body lines not line up. It's ugly. If you already have a list where multiline items look wrong, try setting this length to 0 to see whether a previous global setting of this length has caused problems.

Don't set this length except out of self-defense. It's trouble.

Vertical spacing

```
parskip Space between paragraphs outside of a list, and part of the space between a non-list paragraph and a list item. This is NOT a list property; it can be set globally for entire documen (see SS ref{}).

topsep Extra space added to parskip before the first AND after the last item.

parsep Paragraph separation within a single item.

itemsep Extra inter-item spacing added to parsep

partopsep This is added to the top and/or bottom of the list if and only if there's a blank line above or below the first or last item. Leave this alone unless blank lines become a problem.
```

To customize the description labels (the items inside the square brackets), in the preamble:

```
\renewcommand{\descriptionlabel}[1]{%
  \hspace{\labelsep}
  \ttfamily
  \textcolor{red}{#1}
}
```

This puts the labels in typewriter font in a different color. By default, description labels start a distance equal to hspace to the *left* of the text, so adding that line causes them to line up with the left edge of the text instead.

Alternative way to get red of the space between items (without enumitem package):

```
\usepackage{mdwlist}
...
\begin{document}
...
\begin{itemize}
   \item ...
\end{itemize}

\up{tasks} ???
...
\begin{tasks}(4)
    \task one
    \tast two
\end{tasks}

These will be listed horizontally, rather than vertically.
\begin{list}{}
...
```

\end{list}

Brackets by list will set the style; leave this empty for no symbols

Numbering

```
1.1, 1.2 \rightarrow 1.2.1, 1.2.2, \text{ etc}
\usepackage{enumitem}
\begin{enumerate}[label*=\arabic*.] % ???
\begin{enumerate}[I] % roman numerals
\begin{enumerate}[I.] % roman numberals followed by a period
\begin{enumerate}[(a)] % you get the idea...
To go from section numbering 0.0.1 to just 1, put this in the preamble (copied from internet, but not actually
sure how this works).
\usepackage{titlesec}
\titleformat{\section}%
  [hang]% <shape>
  {\normalfont\bfseries\Large}% <format>
  {}% <label>
  {Opt}% <sep>
  {}% <before code>
  \renewcommand{\thesection}{}% Remove section references...
  \renewcommand{\thesubsection}{\arabic{subsection}}\%...from subsections
  \renewcommand{\thesubsubsection}{\arabic{subsubsection}}\%...from subsections
\begin{document}
```

Color 11

\usepackage{color} is required for pre-defined colors (white, black, red, green, blue, cyan, magenta, yellow) \usepackage{xcolors} is needed to define new colors (see SS ??).

Color background

```
\usepackage{xcolor}
\pagecolor{yellow!30}
```

Color text

```
\usepackage{color}
```

Define your own colors

http://latexcolor.com

```
\usepackage[usenames, dvipsnames]{color}
                                                   \definecolor{color}{HTML}{AF00D7} % HTML must be in caps!
                                                    \definecolor{mypink1}{rgb}{0.858, 0.188, 0.478}
                                                    \definecolor{mypink2}{RGB}{219, 48, 122}
                                                    \definecolor{mypink3}{cmyk}{0, 0.7808, 0.4429, 0.1412}
                                                    \definecolor{mygray}{gray}{0.6}
\textcolor{red}{I want the text in the brackets to\textcolor{mygray}{text I want to be gray}.
```

12 **Hyperlinks**

```
In preamble:
```

```
\usepackage{hyperref}
\hypersetup{colorlinks=true,
   urlcolor=blue,
   linkcolor=black
\urlstyle{same}
```

Insert hyperlink in text:

```
\url{http://google.com}
\href{http://google.com}{link text}
\href{http://google.com}{\textcolor{blue}{link text}}
```

13 Putting text in a box

```
\usepackage{xcolor}
\usepackage{lipsum}
\begin{document}
\lipsum[1]
\medskip
\noindent\fcolorbox{red}{yellow}{%
   \minipage[t]{\dimexpr0.48\linewidth-2\fboxsep-2\fboxrule\relax}
      \lipsum[2]
   \endminipage}\hfill
   \fcolorbox{red}{yellow}{%
   \minipage[t]{\dimexpr0.48\linewidth-2\fboxsep-2\fboxrule\relax}
      \lipsum[3]
   \endminipage}
\medskip
\lipsum[4]
\colorbox{hl}{\parbox{0.9\textwidth}}
text to go in box}
```

Notes: You can adjust the thickness of border and padding of \fcolorbox{<border-color>}{<border-color>}{<contents>} by setting \fboxrule=<value><unit> and \fboxsep=<value><unit>, respectively. Put the setting before invoking \fcolorbox{<border-color>}{<border-color>}{<contents>}. For example: \fboxrule=1pt and \fboxsep=5pt. Use t, c, b options to align the base line of the most top row, the center row and the most bottom row with the surrounding baseline.

14 Columns

```
\begin{minipage}[t]{0.2\textwidth}
    stuff
\end{minipage}
\begin{minipage}[t]{0.8\textwidth}
    longer stuff
\end{minipage}
```

 $\addtolength{\columnsep}{5mm}$ add space between columns.

15 Symbols

```
\textgreater  % >
\textless  % <</pre>
```

some text

16 Writing code into a Latex document

A nicer alternative to verbatim.

```
\usepackage{listings}
\usepackage{color}
\definecolor{mygreen}{rgb}{0,0.6,0}
\definecolor{mygray}{rgb}{0.5,0.5,0.5}
\definecolor{mymauve}{rgb}{0.58,0,0.82}
\lstset{ %
                                   \% choose the background color; you must add \usepackage{color} or \usepackage{xcolor}
 backgroundcolor=\color{white},
                                   \% the size of the fonts that are used for the code
 basicstyle=\footnotesize,
                                   % sets if automatic breaks should only happen at whitespace
 breakatwhitespace=false,
                                   % sets automatic line breaking
 breaklines=true,
  captionpos=b,
                                   % sets the caption-position to bottom
  commentstyle=\color{mygreen},
                                   % comment style
                                   \% if you want to delete keywords from the given language
  deletekeywords={...},
  escapeinside=\{\%*\}\{*\}\},
                                   % if you want to add LaTeX within your code
  extendedchars=true,
                                   % lets you use non-ASCII characters; for 8-bits encodings only, does not work wi
  frame=single,
                                  % adds a frame around the code
                                   % keeps spaces in text, useful for keeping indentation of code (possibly needs of
 keepspaces=true,
 keywordstyle=\color{blue},
                                   % keyword style
 language=Octave,
                                   % the language of the code
                                   \% if you want to add more keywords to the set
  otherkeywords={*,...},
                                   \% where to put the line-numbers; possible values are (none, left, right)
 numbers=left,
 numbersep=5pt,
                                   \% how far the line-numbers are from the code
 numberstyle=\tiny\color{mygray}, % the style that is used for the line-numbers
                                   % if not set, the frame-color may be changed on line-breaks within not-black tex
 rulecolor=\color{black},
                                   % show spaces everywhere adding particular underscores; it overrides 'showstring
  showspaces=false,
  showstringspaces=false,
                                   \% underline spaces within strings only
  showtabs=false,
                                   % show tabs within strings adding particular underscores
  stepnumber=2,
                                   % the step between two line-numbers. If it's 1, each line will be numbered
  stringstyle=\color{mymauve},
                                   % string literal style
                               % sets default tabsize to 2 spaces
  tabsize=2,
                                   % show the filename of files included with \lstinputlisting; also try caption in
  title=\lstname
\begin{lstlisting}
    code code code
\end{lstlisting}
```

17 New and renewed commands and environments

Commands

```
Syntax: \newcommand{<cmd>) [<n>] [<opt>] {<stuff>}
```

n Number of arguments

```
opt Options stuff stuff
```

Existing environments (list, adjustwidth, etc.) can be used inside new commands!

Environments

```
\renewenvironment{name}{%
    ...}
\newenvironment{name}[#]{%
    {<initialization code> (before text)}
    {<finalization code> (after text)}
}
```

18 Verbatim

verb is used "in line", while verbatim is a separate environment:

```
\begin{verbatim}
... text ...
\end{verbatim}
```

\verb|\documentclass{article}|

How to make the begin verbatim text a different color in vi? E.g. a dark gray, but the enclosed text is lighter.

19 Figures

```
\usepackage{graphicx}
...
\begin{figure}[h]
\centering
\includegraphics[width=5.0in]{GreekSymbols.jpg}
\caption{How to insert greek symbols in LaTeX}
\label{greek}
\end{figure}

placement specifiers: [htbp!] 'here', 'top', 'bottom',...
```

20 Tables

```
\begin{table}[h]
\caption{Values for polytropic index $n$ = 4.5}
\centering
\begin{tabular}{ c c c c c c c c c c }
\hline\hline
$n$ & $\xi_1$ & $\rho_c/\rho$ & $N_{n}$ & $\w_n$ & $\Theta_n$
& $\rho_c[g\,cm^{-3}]$ & $P_c[dyne\,cm^{-2}]$ & $T_c[K]$ \\hline
4.5 & 31.841 & 6187.500 & 0.658 & 4917.415 & 3.329 & 8718.704 &
```

```
5.535e19 & 4.742e7 \\
hline
\end{tabular}\\
\label{table:nonlin}
\end{table}
```

For the tabular line, c stands for center-justified; use 1 and r for left and right justified.

21 Bibliographies

```
\bibliographystyle{plain}
\begin{document}
... \cite{id} ...
\bibliography{reffile}
\end{document}
```

Creating and using a makefile

```
cl> vi reffile.bib
   @ARTICLE{label_name,
        title={},
        journal={},
        ...
}
cl> vi makefile
   my_paper: paper.tex
   pdflatex paper
   bibtex paper
   pdflatex paper
   pdflatex paper
   pdflatex paper
   cl> make my_paper
```

22 Maths!

http://www.math.harvard.edu/texman/node17.html

Inside text

Examples

```
• $\frac{1}{4}$ \to \frac{1}{4}   
• $G=6.67\times10^{-8}$ \to G=6.67\times 10^{-8}
```

If text is bold, make math symbols bold as well:

\textbf{This article discusses the \boldmath\$\beta\$ parameter}

This article discusses the β parameter

Equations

Numbered equations

\begin{equation}

 $P_{\text{mag}} = \frac{B^2}{\sqrt{4\pi^0}}$ \left\{equation}

$$P_{\text{mag}} = \frac{B^2}{\sqrt{4\pi\rho_o}} \tag{1}$$

INCLUDE LABELING AND REFERENCING HERE!

Equations without numbering

Note that the \boxed{...} commands are putting the examples in boxes, but are not necessary for writing equations.

```
\begin{equation*}
  \boxed{%
  P_{\textrm{mag}} = \frac{B^2}{\sqrt{4\pi\rho_o}}
  }
\end{equation*}
```

$$P_{\rm mag} = \frac{B^2}{\sqrt{4\pi\rho_o}}$$

Or simply put double \$s on each side of equation:

 $P_{\text{mag}} = \frac{B^2}{\sqrt{4\pi o^2}}$

$$P_{\rm mag} = \frac{B^2}{\sqrt{4\pi\rho_o}}$$

This may not work for more complicated math, such as matrices.

Aligning equations

$$k_1 = hf(x_n, y_n) \tag{2}$$

$$k_2 = hf(x_n + \frac{1}{2}h, y_n + \frac{1}{2}k_1)$$
(3)

$$k_3 = hf(x_n + \frac{1}{2}h, y_n + \frac{1}{2}k_2) \tag{4}$$

$$k_4 = hf(x_n + h, y_n + k_3) (5)$$

$$y_{n+1} = y_n + \frac{1}{6}k_1 + \frac{1}{3}k_2 + \frac{1}{3}k_3 + \frac{1}{6}k_4 + O(h^5)$$
(6)

(7)

Can also remove numbering from aligned equations:

```
\begin{align*}
    ...
\end{align*}
```

Size of brackets, parentheses, etc.

In order of increasing size:

\big(... \big)
\Big(... \Big)
\bigg(... \bigg)
\Bigg(... \Bigg)

BETTER:

\left(... \right)

to scale size of brackets to what is inside them! Increase size of fraction inside text:

 $\cfrac{1}{2}$

There are $\frac{1}{2}$ as many as there were.

There are $\frac{1}{2}$ as many as there were.

Operations

Integrals

\$\int\$ % indefinite integral
\$\int_{x1}^{x2}\$ % definite integral, between x1 and x2

Square root

 $\left(2\ln(2)\right)$

Summation (and the multiplication version)

 $\sum_{n=1}^{\int \int x^{-n} = 1}$

$$\sum_{n=1}^{\infty} 2^{-n} = 1$$

 $$$ P(D|M) \simeq \frac{N-1}_{i=0}\left(\exp \left(1)_{2}\left(\frac{y_i-y(x_i|a_j)}{\sum_{i=0}^2\right)} \right) $$$

$$P\left(D|M\right) \propto \prod_{i=0}^{N-1} \left\{ \exp\left[-\frac{1}{2} \left[\frac{y_i - y\left(x_i|a_j\right)}{\sigma}\right]^2\right] \Delta y \right\}$$

23 Beamer

Read in beamer template here at some point.

```
\setbeamerfont{frametitle}{%
    \verb| font=\left\{16pt\right\}\left\{16pt\right\} \\ | itshape| \\
    size=\fontsize{}{},
    family=\rmfamily,
    shape=scshape,
    series=...
}
\setbeamertemplate{<elementname>}[<predefinedoptions>]<args>
\addtobeamertemplate{<elementname>}{<pre-text>}{<post-text>}
Use the first to change something (bullet symbol). Use the second to add something (vertical space).
\begin{columns}
    \column{0.5\textwidth}
    content goes here
    \column{0.5\textwidth}
    more content here
\end{columns}
```

24 Questions and things to be added

Could make a new environment using \tt for stuff that doesn't apply to latex itself...

In think_python.tex, add part for using straight single quotes in verbatim environment.
