1 Cursor movement

`z<ENTER>`   makes current line the top line of the page

2 Searching

3 Mapping

`:map <ENTER> a<ENTER><ESC`   use return to break lines without going into insert mode.
`:map <F9> 070l`   shortcut for moving to right edge of screen (not working).

4 Misc

4.1 'set' options

4.1.1 Syntax

`:set` *mycommand*

4.1.2 Examples

`:set ignorecase`

`:set tabstop = 4` tab four spaces instead of the default of eight

`:set expandtab` tabs are converted to spaces (useful since not every computer handles tabs the same way, but note that makefiles will not work without actual tabs).

4.2 Other

`:edit!` Undoes all edits since last write `:e!` is the same thing.

`:cal cursor(row, column)` Go to row, column. What can you put in for "row" to indicate the current line the cursor is in?

`:help map-which-keys` Tells what keys are currenly in use.
